

Just say hello!

My Friend

abstract: This is a pandoc test with Markdown + HTML <https://stackoverflow.com/questions/59787127/how-to-add-header-and-footer-to-a-markdown-file>

comment invisible after this :

test with double call of : `pandoc -i repgen_headfooter.md -o repgen_headfooter.pdf |open -a Preview repgen_headfooter.pdf`

its possible to make a markdown template for pandoc or a latex template

latex's pagebreak will start a new page and the paragraphs of the old page will be spread out so that the old page will not look like the end of a chapter.

second page

usepackage(booktabs) <https://www.latex-kurs.de/kurse/2017/Kurs1/Teil9/Tabellen/Druck-Tabellen.pdf>

Studium		
Fach	Dauer	Einkommen (\$)
Info	2	12.75
MST	6	8.20
VWL	14	10.00

next is same as use package(tabular}

1	2	3
4	5	6
7	8	9

third page with ?worse pagebreak instead of newpage
